

Portfolio ^[1]

Navigate BioPharma offers a broad range of technologies, platforms and assays for diagnostic applications and clinical biomarker and endpoint analysis. Our expertise in this area encompasses the following:

- Multiplex Fluorescence Immunohistochemistry (Single to 7 colors)
- Colorimetric immunohistochemistry (C-IHC)
- High-complexity Flow Cytometry (8-16 colors)
- Next Generation Sequencing (NGS)
- Sanger Sequencing
- Gene Expression by NanoString
- Polymerase Chain Reaction (PCR)
- Fluorescence In Situ Hybridization (FISH)
- Pathology Evaluation (Surgical Pathology and Hematopathology)

Attached are some of our offerings in each of these areas, however, through our assay development services, we are continuously adding to these offerings and customizing solutions for our customers.
